SUMMARY

MCA graduate and Junior SOC Analyst candidate with hands-on experience running L1-style detection and triage in a self-built enterprise lab: Wazuh SIEM/EDR alert monitoring, false-positive analysis, incident documentation, and MITRE ATT&CK-based investigation, cross-verified against raw packet captures. Built and operated a rule-based phishing detection tool with an AI-assisted second opinion, directly applying email security and threat-analysis concepts. Comfortable across Windows, Windows Server/AD, and Linux endpoints, with a working understanding of AI-driven SOC automation.

CERTIFICATIONS

- CompTIA Security+ (SY0-701) — valid through 2029
- ISC2 Certified in Cybersecurity (CC) — valid through 2028
- CS50x: Introduction to Computer Science — Harvard University / edX
- ISO/IEC 27001:2022 Lead Auditor — Mastermind Assurance
- Cybersecurity Fundamentals — IBM SkillsBuild (Edunet Foundation internship)
- Cyber Security 101 (SEC1) & Pre Security (SEC0) — TryHackMe
- LFS101: Introduction to Linux — The Linux Foundation

EXPERIENCE

Cybersecurity Volunteer | The GingerHacker Initiative | Jul 2026 – Present

- Moderates the Discord community for this NGO, which helps people break into cybersecurity — welcoming new members and keeping technical discussions on track.
- Researches SEO to improve the discoverability of the organization's free educational resources.
- Produces original cybersecurity video content — scripting, recording, and editing — to grow the channel's educational library.

Cyber Security Intern | Edunet Foundation (IBM SkillsBuild / AICTE-approved)

- Completed a 6-week virtual internship of weekly workshops covering network security, ethical hacking, and threat detection.
- Worked on a real-world-style cybersecurity project end-to-end, from problem framing to a final mentor-reviewed presentation, and earned IBM's Cybersecurity Fundamentals credential.

PROJECTS

SOC Analyst Training Lab ("CakeFactory") | VMware · Windows Server · Wazuh · Wireshark · Cisco Packet Tracer

- Built a simulated enterprise network across three branch VLANs in Packet Tracer, with Active Directory, DNS, DHCP, and IIS running on a Windows Server domain controller and member ser vers.
- Deployed Wazuh as the SIEM/EDR layer, installed agents on every Windows and Debian endpoint,

and configured log forwarding and file-integrity monitoring to surface failed logins and malware indicators as alerts — resolving false positives before escalation.
- Cross-checked Wazuh alerts against raw packet captures in Wireshark before treating any finding as confirmed — DHCP, DNS, and SMB traffic first, verdict second.
- Wrote up the lab architecture, user/OU structure, incident documentation, and screenshots of each detection in a public GitHub repo so the investigation trail is reproducible.

Phishinator — Rule-Based Phishing Detection with AI Inference | Python

- Runs deterministic rule checks first — header anomalies, URL/domain heuristics, sender reputation — then hands ambiguous cases to an AI inference layer for a second opinion, reflecting a human-in-the-loop approach to AI-driven security automation.
- AI layer returns a verdict plus a rationale, not just a label, so a reviewer can see why a message was flagged or cleared before acting on it.
- Logs every rule hit and AI verdict against the final human call, building a small dataset to track false-positive and false-negative rates over time.

TECHNICAL SKILLS

- SIEM & XDR: Wazuh (Hands-On, Home Lab), Microsoft Sentinel (Concepts), Microsoft Defender XDR (Concepts), Splunk (Fundamentals)
- SOC & Incident Analysis: Incident Response Lifecycle, Alert Triage & Prioritization, Incident Verdict Validation, False-Positive Analysis, Incident Documentation, IOC Analysis
- Detection Engineering: YARA Rules (Awareness), Sigma Rules (Awareness), EQL, KQL (Awareness), Threat Intelligence Concepts (IOCs, TTPs, Threat Actors), Regex for Log Parsing
- Network & Packet Analysis: Wireshark, tcpdump, Suricata, Netcat, Brim/Zui
- Frameworks & Security: MITRE ATT&CK, OWASP Top 10, Threat Detection, Threat Classification
- Operating Systems: Linux, Windows, Windows Server, Sysmon, PowerShell, Active Directory
- Networking: TCP/IP, DNS/DHCP, HTTP/S, UDP, VLANs, Firewall Concepts, Cisco Packet Tracer
- Languages & Tools: Python, Bash/Shell Scripting, JavaScript, Git/GitHub

EDUCATION

Master of Computer Applications (MCA) — Computer Science | SRTMUN University, Nanded | 2024 – 2026

- CGPA: 8.88 (80.63% aggregate)

Bachelor of Science (B.Sc.) | Jai Narain Vyas University, Jodhpur | 2021 – 2023

- 72.14% aggregate

LEADERSHIP & COMMUNITY

- Founder, xSecIRC Project — grew a Discord/Telegram community focused on free cybersecurity and programming education to 900+ members; writes and reviews the technical learning content himself.
